

Use-Case Flow Specification

Use Case: Participate in Chapter Discussion

Primary Actor: Club Member

Goal: The club member wants to participate in the discussion for a particular chapter and share their thoughts with other club members.

Main Success Scenario

1. Club member selects the current book from the portal.
2. System displays the chapters.
3. Club member selects a particular chapter they want to discuss.
4. System displays the discussions for the chapter chosen by the user.
5. Club member is prompted to enter a comment.
6. Club member submits comment.
7. System validates comment.
8. System posts the comment in that particular chapter's discussion page.
9. System displays a confirmation message that the comment has been posted successfully.
10. Use case ends successfully.

Alternate Flow — Spoiler Content

At Step 5, if the club member's comment contains information about a later part of the book:

- 5a. The club member marks the comment as a spoiler.
- 5b. The system marks the comment as spoiler content.
- 5c. The system posts the comment with the spoiler content hidden.
- 5d. Other members must explicitly choose to reveal the spoiler or have the corresponding chapter marked as read before viewing it.
- 5e. The use case continues from Step 9 of the Main Success Scenario.
